# Reis Nummus 6531-V

## Special features

There are more and more deciding factors in achieving an accurate and fast accounting of daily takings, whilst attempting also to increase planned operational efficiency increases:

- Precise and fast counting of the coins
- Precise and fast counting of the banknotes
- Identification of the driver/depositor
  
- Immediate on-line availability of the counted totals
- Secure storage of the money within the machine
- Simple and secure machine emptying by either own personnel or CIT company

Just as important is the robustness and security of the machine during the hard working environment of a transport company.

The 6531-V is equipped with the very latest high frequency detector technology RCDS III. Reliable recognition of foreign and all latest counterfeits coins.

Over 3000 units of the Nummus cash deposit deposit systems are installed throughout the world and have proven their effectiveness in providing a saving in operational costs.

The secure on-line booking information cannot be altered, even when it is connected to the in-house accounting system. Reis Eurosystems can call on many years of experience of interfacing to most accounting systems available on the market.
