

PRO COBRA 1300 IR

Infrared Detector

PRO COBRA 1300 IR – is a unique combination of a reliable counterfeit banknotes detection, original design and high performance. The ease of operation and affordable price allows it to be used in various organizations: cash offices, stores, retail outlets, accounting departments etc.

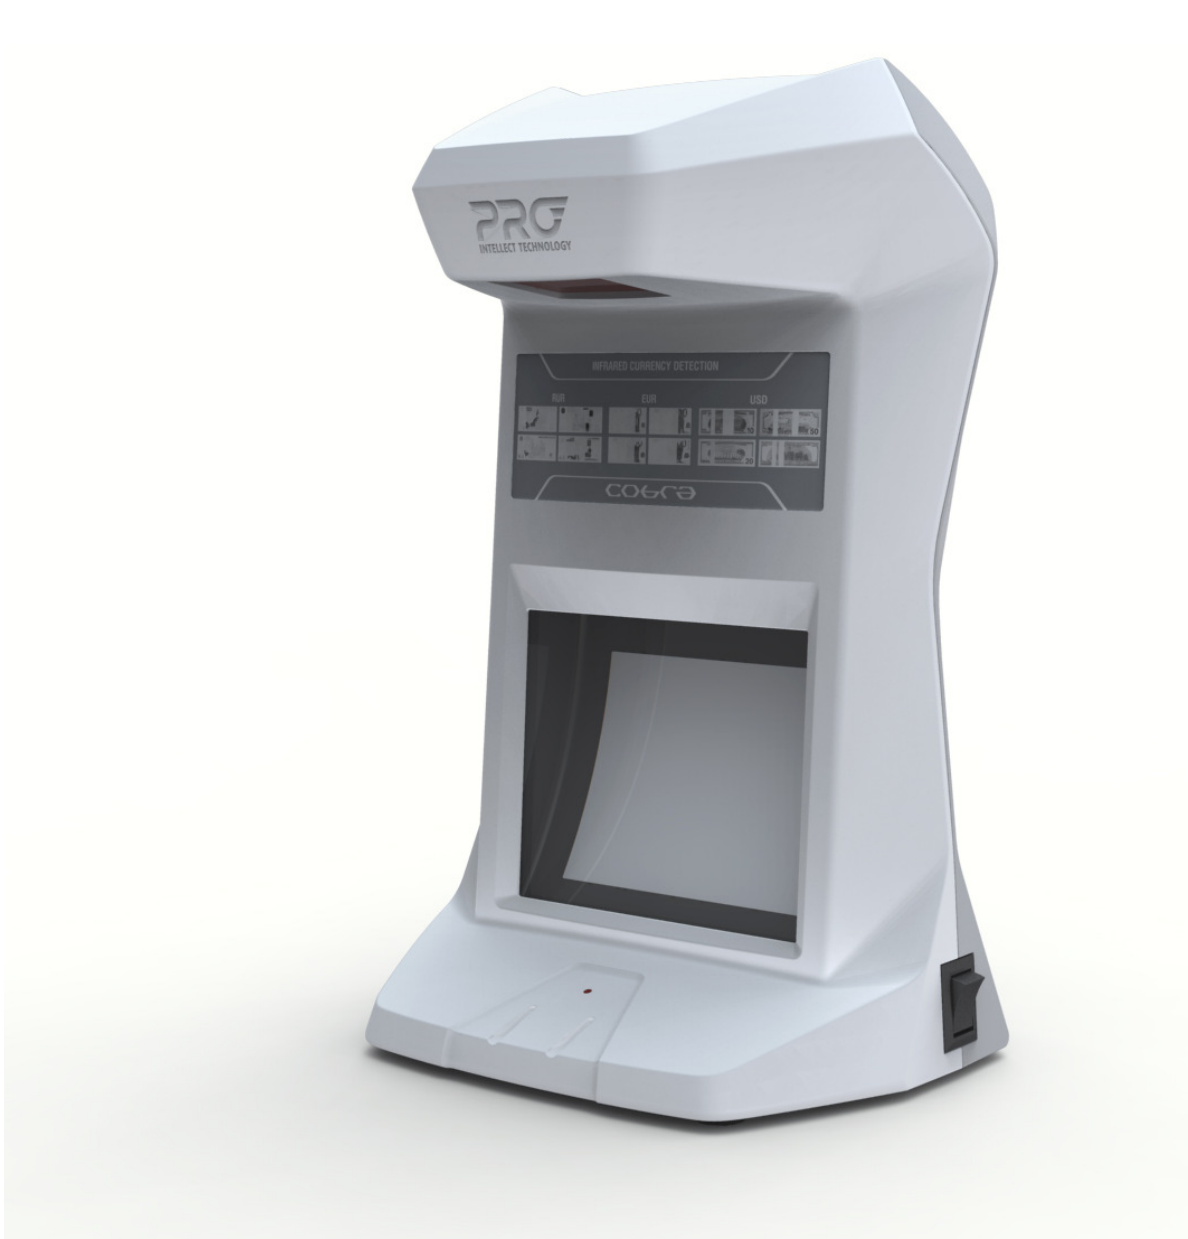

Infra-Red detection
Automatic turn-on / turn-off sensor
Possibility of banknotes' verification in a set

► FUNCTIONS AND ADVANTAGES

- Verification of Infra-Red image of a banknote
- High contrast image
- No inert zones thanks to the vertical position of the camera
- Geometrically correct visualization of a banknote on the display
- Possibility of banknotes' verification in a set
- Automatic turn on / turn off sensor
- Compact size, takes little place on the desk

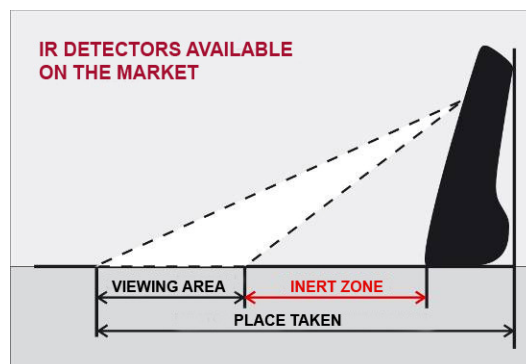

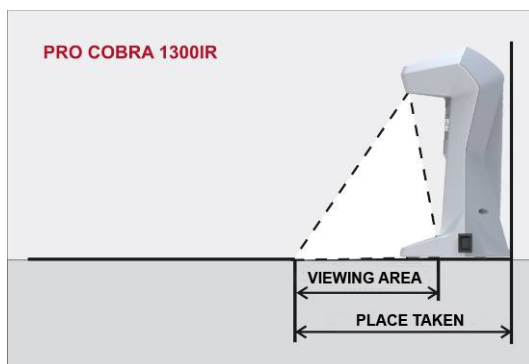

► **TECHNICAL SPECIFICATIONS PRO COBRA 1300 IR**

CRT display	4"
IR wave length	~ 870 nm
Power supply	~ 100-240V/50-60Hz
Power consumption	20 W
Dimensions	156x128x244 mm
Net weight	1,1 kg

Currency detectors of PRO COBRA 1300 IR series verify the infra-red image of any country's banknotes.

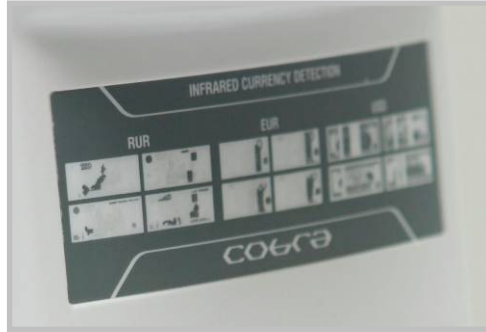

The IR camera is located in a way to avoid the appearance of inert zones, which exist in some IR detectors. PRO COBRA 1300 IR takes considerably less place on the desk of a cashier.

The image of a banknote is visualized on the screen without significant distortion thanks to the vertical location of the camera and sharp focusing.

IR image of a banknote can be verified by placing them one by one or in a set.

The icon on the body of the detector serves as a hint to a cashier. The IR image of basic set of currencies is present on the icon (EUR, USD and RUB). It can be changed to show any other currency.

The detectors of PRO COBRA 1300 IR series are equipped with an automatic turn on / turn off sensor. When a banknote is placed on the detector it will turn on automatically, after several minutes of inactivity the detector goes stand-by. This function helps to extend the working life of the device and reduce power consumption.

Stable and monolithic body construction alongside with the anti-sliding elements will not allow the device to fall over or to get loose during the exploitation.

The PRO COBRA 1300 IR detector is compact and does not take a lot of place on the desk. Thanks to its modern design and warm combination of colors it will fit in any interior perfectly.
